FAQs

Question

Does the module take discounts into consideration?

Answer

Yes, the module looks for negative order charges and applies them to the ORDER_DISCOUNTS value of the Google Trusted Stores Conversion Code.

Question

I am using MaxMind to block certain countries, will this be an issue.

Answer

Yes, this is considered against Google Trusted Stores guidelines. It is highly recommended that you consult with your Google Trusted Stores rep for any clarification.

Question

I am getting a "Optional: Google Shopping Item ID is missing" warning on my Google Trusted Stores implementation, how do I fix this?

Answer

These warnings are non-critical and do not affect core functionality.

From Google's Docs: Warnings on common pages or confirmation pages These are non-critical errors found in optional fields in the Google Trusted Stores badge code. These errors do not affect core functionality; you can safely ignore these warnings as they triggered by optional variables. If you see this non-critical error on a non-product page or if you have chosen to leave out this field, you may disregard this warning.

See more at https://support.google.com/trustedstoresmerchant/answer/6063083?hl=en.

Question Do I need a robots.txt file?

Answer

Yes. Google requires this for Google Trusted Stores implementation. This module does not add this automatically. In most cases this is done by your hosting provider when your store was first installed. If you don't have this setup already this will need to be created and installed for Google to accept your Google Trusted Stores setup. You can do this on your own by following guidance at https://support.google.com/webmasters/answer/6062608?hl=en or contact Glendale Designs to have us do this for you.
