Cross Baskets

Module Version: 1.0000

Last Updated: 03/23/2026

Installation

To begin, the module file must be uploaded to the domain settings.

1. Log in to the Miva Merchant Admin.

2. Navigate to **Settings** (bottom left)→ **Domain Settings**.

3. Select the **Modules** tab.

4. Click the **Add Module** button (usually located at the top right).

5. In the modal that appears, click **Upload** and select the file multi-currency.mvc from your computer.

6. Once uploaded, click **Add** to complete the installation.

Activation & Licensing

After installation, the module must be licensed.

1. Navigate to **Settings** → **System Extensions**.

2. Select the **Cross Baskets** tab.

3. **Licensing**:

   - A section in the bottom right corner will appear, requiring license details.

   - Enter your **License Key** and **License Signature**.

   - Click **Save** to activate the module.

Overview

This module enhances the default e-commerce experience by tying a customer's shopping cart directly to their account rather than their current browser session. By default, visiting a store creates a temporary, anonymous basket, meaning items added from a mobile phone won't appear when the user later logs in from a desktop computer. This module solves that limitation by securely saving and retrieving account-specific baskets, ensuring a seamless and continuous shopping experience across all devices.

When a user logs into their account, the module automatically switches them to their persistent customer basket, restoring any items they previously added. If the user browsed the store and added new items to an anonymous basket before logging in, the module seamlessly merges those new items into their saved account basket. This guarantees that no selected products are lost during the authentication process.

To maintain privacy and prevent item duplication, the module handles logouts cleanly. Once a user signs out, their active customer basket is safely stored, and the current browser session is immediately reset to a fresh, empty anonymous basket. This prevents previous items

from being merged twice upon a subsequent login and ensures that the customer's cart is not exposed to anyone else using the same device.

Example

For example, you can try out how it works on Amazon. Amazon offers the same functionality that this module provides for Miva stores.

Support

For additional support or assistance with installation and configuration, please contact me by email: hello@pashamoroz.com.
